

Cupcake stand assembly instructions.

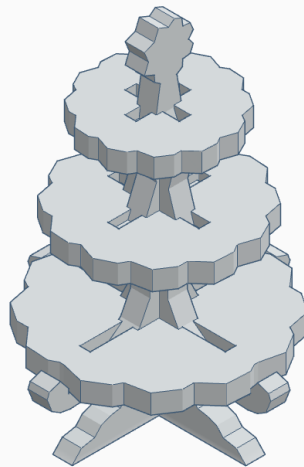

Please read all instructions carefully before gluing any parts together.

This kit was cut with a laser. It has some leftover black particles on it. Please clean carefully with a tack cloth (or a very lightly damp paper towel) before handling or assembling. One side of the wood will have more smoke marks than the other side. Consider this prior to gluing, so you have a plan about what part of the model you want to show most prominently.

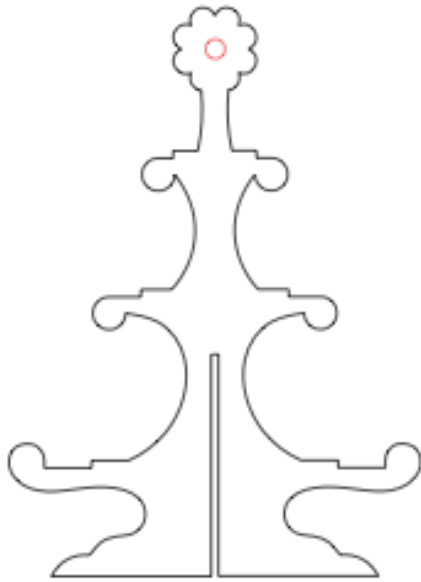

- Slide “A” piece into the Top of “B”. This will form the upright of the stand
- Slide piece “C” piece onto the upright stand. It should reset easily on the bottom (widest) supports
- Slide “D” onto the upright stand. It should rest easily on the middle supports.
- Slide “E” onto the upright stand. It should rest on the top supports.
- Glue as desired.

Notes:

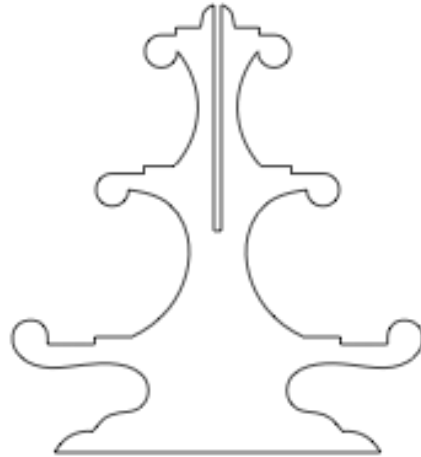

Consider painting or staining prior to assembly / gluing to allow complete coverage.
Double check placement prior to gluing.
